

Create a Calendar Alarm to run an AppleScript

1. Create a new Calendar Alarm in Automator

2. Define the New Calendar Alarm

1. Select 'Run AppleScript' action.
2. Paste in the script that will build your OmniFocus project.
3. Save the Calendar alarm.

3. Calendar - Create a New Event

Nota Bene: The event's calendar must be on the Automator Calendar.

1. Click on the Alert, and select text: Open File.
2. Click on the text: iCal.
3. The first time you run the alarm it will not show up in the pop up.
 - A. Click 'Other'.
 - B. Navigate to ~/Library/Workflows/Applications/Calendar.
 - C. Select the alert.

Observations:

- After you set the alarm once, you can select it from the shown pop up (See that omniTest alert).
- This same approach works for my in BusyCal.
